Attn: Denise Watson, Executive Director
dwatson@mtnvalleyhospice.org

Dear Mr. Farmer,

Mountain Valley Hospice and Palliative Care (MVHPC) is submitting this letter in response to the petition submitted by Hospice of Wake County (HOWC) to change the hospice inpatient bed need methodology. HOWC's petition should be denied for the following reasons:

- Reducing the inpatient utilization rate from 6% to 3.5% would negatively impact access to cost effective hospice inpatient services.
- Hospice inpatient days of care have increased at faster rates compared to overall hospice days of care.
- The majority of counties with hospice inpatient facilities have a hospice inpatient utilization rate greater than 3.5%.
- The statewide hospice inpatient utilization rate is suppressed by lack of access to hospice inpatient beds.
- Based on projected population growth and aging, hospice utilization will continue to increase.

Access

Hospice inpatient beds provide a unique and vital service for hospice patients. Hospice inpatient facilities are a place for persons to be free from pain resulting from their infirmities, to rest, be at peace, to relax, to be supported clinically and emotionally while surrounded by their family and friends in a home-like setting. Besides a patient's own home, there is no other place designed to provide the same level of comfort for hospice patients than an inpatient hospice facility. As such, it is critically important that hospice patients have adequate access to hospice inpatient beds.

According to the 2013 SMFP, there are only 35 counties (out of 100) in North Carolina that host a free-standing hospice inpatient facility. Twenty two of these facilities (59.5%) are located in rural counties and 15 are located in urban counties (40.5%). Generally speaking, residents of rural counties have comparatively less access to healthcare services than residents of urban counties. Additionally, residents of rural counties have comparatively less monetary resources to travel long distances than residents in urban counties. According to the North Carolina Rural Economic Development Center, 85 counties in North Carolina are considered rural. Forty three counties in North Carolina have a population of 20% or greater that are living in poverty, all of which are rural (see Attachment 1). Thus, access to cost effective end of life care is of great relevance with regard to hospice inpatient services.

Reducing the inpatient utilization rate from 6% to 3.5% would negatively impact access to cost effective hospice inpatient services. Based on FY2011 data (available in the 2013 SMFP), all but four of the rural counties with hospice inpatient facilities have an inpatient utilization rate that is greater than 3.5%. Please refer to the following table.

Hospice Inpatient Facilities Located in Rural NC Counties

County	Facility	FY2011 Days of Care	Hospice Days of Care	% of Total Days
Burke	Burke Palliative Care Center	1,362	42,375	3.2%
Cabarrus	Hospice & Palliative Care of Cabarrus County	1,556	52,497	3.0%
Caldwell	Caldwell Hospice & Palliative Care	1,597	_	ļ
Caldwell	Caldwell Hospice and Palliative Care, Inc	984	51,029	5.1%
Cleveland	Wendover - Hospice House	1,825		
Cleveland	Kings Mountain Hospice House	1,307	53,976	5.8%
Columbus	Lower Cape Fear Hospice, Inc.	2,045	35,419	5.8%
Davidson	Hospice of Davidson County/Hinkle House	2,301	44,737	5.1%
Duplin	Carolina East Hospice Care Center	745	20,473	3.6%
Harnett	E. Carlton Powell Hospice Center	1,456	26,765	5.4%
Henderson	Elizabeth House	4,690	68,151	6.9%
Iredell	Gordon Hospice House	3,123	48,955	6.4%
Johnston	Johnston Memorial Home Care and Hospice	683	31,042	2.2%
Pitt	University Health Systems Inpatient Hospice	1,923	53,498	3.6%
Randolph	The Randolph Hospice House	994	51,527	1.9%
Robeson	Southeastern Regional Medical Center	2,319	38,628	6.0%
Rockingham	Hospice of Rockingham County, Inc	1,026	15,826	6.5%
Rutherford	Hospice of Rutherford County, Inc.	3,139	49,043	6.4%
Scotland	Hospice of Scotland County	1,997	19,648	10.2%
Surry	Mountain Valley Hospice and Palliative Care	4,566	55,750	8.2%
Union	Hospice of Union County	1,266	30,837	4.1%
Wayne	3HC/Kitty Askins Hospice Center	2,497	26,609	9,4%
	Total	43,401	816,785	5.3%

Source: 2013 SMFP, NC Rural Economic Development Center, Inc.

The average hospice inpatient utilization rate for rural NC counties with a hospice inpatient facility was 5.3% during FY2011. Indeed, MVHPC is a hospice provider in rural Surry County, which has a hospice inpatient utilization rate of 8.2%. Therefore, HOWC's petition to reduce the inpatient utilization rate from 6% to 3.5% would negatively impact access to hospice inpatient services in rural counties by making it more difficult for counties without hospice inpatient beds to develop new facilities, and by making it extremely difficult for existing facilities to expand their capacity to meet current and projected demand. Therefore, the petition submitted by HOWC should be denied.

Hospice Inpatient Utilization

Hospice inpatient utilization has increased dramatically during recent years. Please refer to the following table.

North Carolina Hospice Utilization, FY08-FY11

	FY2008	FY2009	FY2010	FY2011	08-11 Growth
Total Hospice Days	2,679,298	2,657,371	2,873,424	2,915,218	8.8%
Inpatient Days of Care	83,728	91,646	99,178	102,824	22.8%

Source: 2013 SMFP, DHSR Hospice Data Supplements

Hospice inpatient days of care have increased 22.8% during the most recent three fiscal years. Comparatively, total hospice days of care grew 8.8% during the same time period. Hospice inpatient utilization has grown due, much in part, to the development of hospice inpatient beds in freestanding hospice facilities. In 2006, there were only 23 hospice inpatient facilities in North Carolina. According to the 2013 SMFP, there are now 40 hospice inpatient facilities in North Carolina located in 35 different counties.

While hospice inpatient utilization has grown markedly during recent years and the current SMFP methodology has facilitated the development of new hospice inpatient facilities, the majority of North Carolina counties lack access to hospice inpatient beds. Sixty five counties in North Carolina do not have local access to a hospice inpatient facility. This limits the growth potential for hospice inpatient days of care. Furthermore, based on FY2011 data available in the 2013 SMFP, a majority (22 of 37, or 59.5%) of the existing hospice inpatient facilities are operating over 75% occupancy. Please refer to the following table.

North Carolina Hospice Inpatient Facilities, FY2011

County	North Carolina Hospice Inpatient Fa	Licensed Beds 9/30/2011	FY11 Days of Care	FY11 Occupancy Rate
Alamance	* Hospice Home (Hospice of Alamance-Caswell)	14	2,432	80.6%

Union	Hospice of Union County	6	1,266	57.8%
Wake	Hospice of Wake County, Inc	14	3,028	59.3%
Wayne	* 3HC/Kitty Askins Hospice Center	12	2,497	80.5%

Source: 2013 SMFP

^{*}Occupancy rates adjusted for beds open during the data reporting year or for part of reporting year.

Due to limited access to hospice inpatient services statewide, combined with the fact that a majority of inpatients facilities are operating at or near practical capacity, hospice inpatient utilization is suppressed and limited in its growth potential. In addition to being inconsistent with inpatient utilization rates for the majority of counties that host hospice inpatient facilities, HOWC's petition would further inhibit the growth potential for hospice inpatient services by restricting development of new hospice inpatient beds.

Population & Aging

Across North Carolina, the environment for healthcare providers is changing significantly. Not only is the population expected to increase, but also the aging of the baby boomer generation will place greater demands on healthcare providers, as the community's demand for healthcare services continues to grow. The population age 65 and older makes up a substantial portion of the State's population. Additionally, this age cohort is projected to increase significantly during the next five years. Please refer to the following table.

North Carolina Population Growth

	2013	2018	5-Yr CAGR
Total NC Population	9,886,347	10,409,046	1.0%
NC Population >65+	1,405,311	1,657,624	3.4%
% of Total Population	14.2%	15.9%	

Source: NC Office of State Budget & Management

It is important to recognize the aging population, due to the correlation of age and hospice use. Since hospice is designed to provide end-of-life care, the vast majority of hospice patients are typically age 65 and older. According to the National Hospice and Palliative Care Organization in 2011, 82.7 percent of North Carolina hospice patients were 65 and older - and more than one-third of all hospice patients were 85 years of age or older. Thus, as the State's population continues to grow and age, the utilization of hospice services (including hospice inpatient services) will also increase.

Conclusion

In closing, we feel there are several valid reasons to deny HOWC's petition to change the current SMFP methodology for hospice inpatient beds. Their petition would have a detrimental impact on access to hospice inpatient services for North Carolina residents, especially those residing in rural counties. For this reason and the reasons identified previously in this letter, MVHPC urges the SHCC to deny HOWC's petition.

Yours very truly,

Denise Watson, Executive Director

Densi Wator

See the county-level poverty rates from the 1990 and 2000 Census of Population.

See important notes about intercensal model-based poverty estimates.

The 2003 rural-urban continuum codes classify metropolitan counties (codes 1 through 3) by size of the Metropolitan Statistical Area (MSA), and nonmetropolitan counties (codes 4 through 9) by degree of urbanization and proximity to metro areas. See <u>ural-urban continum codes</u> for precise definitions of each code.

Source: Bureau of the Census, Small Area Income and Poverty Estimates.

*See the Census Bureau web site for a description of FIPS codes.

The previous update of the poverty data in the County-Level Data Sets (completed on February 26, 2013) was incomplete, leaving 2010 data in tables labeled as 2011 data. This problem was corrected on March 8, 2013, so that 2011 poverty data is now reported in both the State-county maps and the accompanying tables.
