This Life Safety Code (LSC) survey was conducted as per The Code of Federal Register at 42CFR 483.70(a); using the 2000 Existing Health Care section of the LSC and its referenced publications. This building is Type III construction, protected, one story, with a complete automatic sprinkler system.

At time of survey the:
Total Certified Bed Count = 120
Census = 109

The deficiencies determined during the survey are as follows:

This STANDARD is not met as evidenced by:
42 CFR 483.70 (a)

Based on observations, on January 14, 2015 at approximately 8:00 AM onward, the following deficiencies were noted:
1) The ceiling in the kitchen around the sprinkler head near the dishwashing and entrance door to the dining room was not maintained in good condition. There paint was peeling and sheetrock deterioration around the sprinkler head.
2) The sheetrock in the attic that is part of the one hour fire rated corridor has holes that were not sealed in order to maintain the required rating

1.) The sheetrock around the sprinkler head near the dishwashing and entrance door to the dining room will be repaired and repainted by 2/26/15. Review of similar areas in the building by the Director of Maintenance revealed no further issues and no Residents were affected.

2.) The holes in the sheetrock in the attic on 100 Hall above the Nursing Station will be fire caulked to restore fire rating 2/26/15. Review of similar areas in the

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

required to resist the passage of smoke. There is no impediment to the closing of the doors. Doors are provided with a means suitable for keeping the door closed. Dutch doors meeting 19.3.6.3.6 are permitted. 19.3.6.3

Roller latches are prohibited by CMS regulations in all health care facilities.

This STANDARD is not met as evidenced by: 42 CFR 483.70 (a)

Based on observations, on January 14, 2014 at approximately 8:00 AM onward, the following deficiencies were noted:
1) The corridor doors to resident rooms 221, 216, 103, 116 and clean linen located next to room 124 was did not close and latch when checked.
2) The double corridor doors to the dining room did not close and latch smoke tight.
3) The corridor door to the Nurse station on 200 hall was removed and not providing a smoke tight corridor.

1.) The latches to rooms 103, 116, 216, 221 and the clean linen room next to room 124 will be adjusted or replaced to insure proper closure by 1/29/15. Review of similar areas in the building by the Director of Maintenance revealed no further issues and no Residents were affected.

2.) The latch to the double corridor doors to the dining was adjusted for proper closure on January 20, 2015 and final adjustment made on January 22, 2015. Review of similar areas in the building by the Director of Maintenance revealed no further issues and no Residents were affected.

3.) The corridor door to the Nurses Station on 200 Hall will be replaced with the properly rated door for that area by
