approximately 8:30 AM onward, the following deficiencies were noted:
1) The smoke walls located on the 100, 200, 300 hall, and the smoke wall between the kitchen and dining room have holes and/or penetrations that were not sealed in order to maintain the fire resistance rating of the walls.

NFPA 101, 19.3.7.3
NFPA 101, 8.3.6.1

This deficiency affected 5 of approximately 7 smoke compartments.
Failure to comply with minimum standards as referenced increases the risk of death or injury due to fire and/or smoke.

alleged deficiencies. To remain in compliance with all federal and state regulations the facility has taken or will take the actions set forth in this plan of correction. The plan of correction constitutes the facility’s allegation of compliance such that all alleged deficiencies cited have been or will be corrected by the date or dates indicated.

Corrective Action

On 2/12/2015 the Maintenance Director completed sealing all holes/penetrations noted in the 100,200,300 and kitchen/dining room smoke walls. This was completed following the recommendations made by the Life Safety Surveyor.

Resident Potentially Affected

All residents have the potential to be affected by this alleged deficient practice

Systemic Changes

The Maintenance Director sealed all holes/penetrations noted in the 100,200,300 and kitchen/dining room smoke walls. This was completed following the recommendations made by the Life Safety Surveyor.

Monitor

The Maintenance Director checked all

One hour fire rated construction (with ½ hour fire-rated doors) or an approved automatic fire extinguishing system in accordance with 8.4.1 and/or 19.3.5.4 protects hazardous areas. When the approved automatic fire extinguishing system option is used, the areas are separated from other spaces by smoke resisting partitions and doors. Doors are self-closing and non-rated or field-applied protective plates that do not exceed 48 inches from the bottom of the door are permitted. 19.3.2.1

Based on observations, on February 4, 2015 at approximately 8:300 AM onward, the following deficiencies were noted:

1) The corridor door to the kitchen located near the side exit door and the kitchen door separating the dining from kitchen located in the rated wall on the left side facing the kitchen from the dining room did not close latch and seal smoke tight. This deficiency affected 2 of 4 kitchen door. Failure to comply with minimum standards as referenced increases the risk of death or injury.

The statements made on this plan of correction are not an admission to and do not constitute an agreement with the alleged deficiencies. To remain in compliance with all federal and state regulations the facility has taken or will take the actions set forth in this plan of correction. The plan of correction constitutes the facility’s allegation of compliance such that all alleged deficiencies cited have been or will be corrected by the date or dates indicated.

### Summary Statement of Deficiencies

(Each deficiency must be preceded by full regulatory or LSC identifying information)

**K 144 Continued From page 4**

This STANDARD is not met as evidenced by:

42 CFR 483.70 (a)

Based on observations, on February 4, 2015 at approximately 8:30 AM onward, the following deficiencies were noted:

1) The Emergency Generator when tested did not crank and transfer load from normal to emergency power in 10 seconds. Time to transfer from normal to emergency connected load was approximately 13 seconds.

   NFPA 110: 3-4.1
   NFPA 99 3-4.1.1.8

   This deficiency affected the entire facility. Failure to comply with minimum standards as referenced increases the risk of loss of power.

The statements made on this plan of correction are not an admission to and do not constitute an agreement with the alleged deficiencies. To remain in compliance with all federal and state regulations the facility has taken or will take the actions set forth in this plan of correction. The plan of correction constitutes the facility’s allegation of compliance such that all alleged deficiencies cited have been or will be corrected by the date or dates indicated.

**Corrective Action**

On 2/28/2015, Thomas Pridgen with TP2 Power Solutions was able to adjust the stepper motor driver gain to ramp engine speed quicker. When tested it cranked and transferred load from normal to emergency power in under 10 seconds. On 3/2/2015, the generator was tested again with Administrator, Maintenance Director and Thomas Pridgen and generator transferred from normal to emergency in under 10 seconds.

**Resident Potentially Affected**

All residents have the potential to be

<td>affected by this alleged deficient practice.</td>
</tr>
</tbody>
</table>

**Systemic Changes**

The generator has been adjusted to crank and transfer load from normal to emergency power in under 10 seconds.

**Monitor**

Maintenance Director will test generator weekly and monitor transfer times to ensure they stay under the required 10 seconds. Maintenance Director will report findings to QOL Committee.
