### Summary Statement of Deficiencies

**K 018**

Continued From page 1

The facility has doors at the following locations that were noncompliant.

- The doors in the following corridor walls did not close, latch and seal as required.
  1. Door B139 to the staff workroom had a gap at the bottom of the door where the door was warped.
  2. Door 21 did not latch properly as the door was warped and made the door hard to latch.

The deficiency affects doors in 2 of approximately 8 smoke zones in the facility.

**K 056**

NFPA 101 LIFE SAFETY CODE STANDARD

There is an automatic sprinkler system, installed in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, with approved components, devices, and equipment, to provide complete coverage of all portions of the facility. The system is maintained in accordance with NFPA 25, Standard for the Inspection, Testing, and Maintenance of Water-Based Fire Protection Systems. There is a reliable, adequate water supply for the system. The system is equipped with waterflow and tamper switches which are connected to the fire alarm system. 18.3.5.
## Statement of Deficiencies

**Name of Provider or Supplier:** Friends Homes at Guilford  
**Street Address, City, State, ZIP Code:** 925 New Garden Road, Greensboro, NC 27410

<td>This STANDARD is not met as evidenced by: Based on observations on 1/22/2015 at approximately 1:00 PM onward, the following deficiencies were noted: The facility did not have sprinkler coverage installed in the one hour rated room. The electrical room on the &quot;Maples&quot; pod was rated for and walls were stenciled as a one hour rated room and did was not protected by an automatic sprinkler system. This deficiency affects 1 of 3 such electrical rooms in the facility. Ref: 2000 NFPA 101 Section 19.3.5</td>
<td>K 056</td>
<td></td>
<td></td>
<td>Report on the cited deficiency K056: On January 22, 2015 a Life Safety Code Survey was conducted including an inspection of the electrical room on the Maples pod, specifically room D 123. At the time of the inspection it appeared that no coverage by the sprinkler system was present. Therefore the facility was cited as noted in the applicable CMS 2567. On January 29, 2015 the facility Assistant Director of Environmental Services went to the electrical room in question to examine what needed to be done to correct the deficiency. In the course of his examination the Assistant Director discovered that there was an appropriate connection to the sprinkler system in the form of a sprinkler head; however, it was covered by a protective cap which acted to protect the sprinkler head during the painting of the room. The cap was easily removed by lifting it off the sprinkler head. Thus, no deficiency was present at the time of the inspection. No other electrical rooms were affected.</td>
