Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

**Continued From page 1**

Approximately 10:30 AM onward, the following deficiencies were noted:

1. On activation of fire alarm system, strobe's on horn/strobe device on short 300 hall did not work and strobe in Dining room did not work.
2. HVAC system on 100 and 400 hall did not shut down on activation of fire alarm (units are over 2000 cfm).

**NFPA 101, 19.5.2.1**  
**NFPA 90A, 4.2**

This deficiency affected two of seven compartments. Failure to comply with minimum standards as referenced increases the risk of death or injury due to fire and/or smoke.

**NFPA 70 & 72**

This deficiency affected two of seven compartments. Failure to comply with minimum standards as referenced increases the risk of death or injury due to fire and/or smoke.

**Survey.** As of 5/12/15 the horn/strobe circuit for the 300 hallway was rewired to provide for proper operation upon fire alarm activation.

All other areas that have the same potential to be affected have been tested and are working properly as of 5/12/15.

To ensure the deficient practice does not occur, strobe operation will be noted during monthly/quarterly fire alarm drills and noted on the logs at that time.

Maintenance Director is responsible.

2. The fire alarm vendor for the facility was contacted on 5/5/15 to make them aware of the concerns noted during the survey. On 5/5/15 the HVAC vendor was contacted to work in tandem with the fire alarm vendor to ensure proper wiring and shutdown of HVAC system on 100 and 400 halls upon activation of the fire alarm.

(Note: While troubleshooting the noted deficiencies and upon inspection, Fire Alarm and HVAC vendors have determined that none of the air handlers throughout the facility exceed 2000 CFMs. Per conversation with surveyor on 5/28/15, Gordon Washburn, he is aware that units do not exceed 2000 CFMs and is in agreement that this item is NOT out of compliance.)

All other areas that have the same potential to be affected have been tested and are working properly as of 5/12/15.

**Required automatic sprinkler systems are continuously maintained in reliable operating condition and are inspected and tested periodically. 19.7.6, 4.6.12, NFPA 13, NFPA 25, 9.7.5**

This STANDARD is not met as evidenced by:

42 CFR 483.70 (a)

Based on observations, on 05/05/2015 at approximately 10:30 AM onward, the following deficiencies were noted:

1. sprinkler heads in kitchen are not maintained in good condition.
2. paint is on sprinkler head in linen room by day room on 100 hall.
3. sprinkler heads in electrical closet by room 201 are not maintained in good condition.

NFPA 101, 19.7.6.12
NFPA 25 and 13

This deficiency affected entire facility. Failure to comply with minimum standards as referenced increases the risk of death or injury due to fire and/or smoke.
