The deficiencies determined during the survey are as follows:

 NFPA 101 19.7.6, 4.6.12, NFPA 13, 1. Upon disclosure of the concern through the Life Safety survey process, the maintenance director identified that the facility’s dry sprinkler system has not had an internal inspection within the last 5 years. The maintenance director has already requested proposals from 3 separate contractors for this inspection prior to this deficiency being cited. The maintenance director has contacted American Fire & Equipment to repropose

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.

1. NFPA 25, 9.7.2.1

2. NFPA 13 ...distinctive supervisory signal shall be provided to indicate a condition that would impair the satisfactory operation of the sprinkler system."

3. NFPA 9.7.2.1 ...supervisory attachments shall be installed and monitored for integrity in accordance with NFPA 72 AND a distinctive supervisory signal shall be provided to indicate a condition that would impair the satisfactory operation of the sprinkler system...Supervisory signals shall sound AND shall be displayed either at a location within the protected building that is constantly attended by qualified personnel or at an approved, remotely located receiving facility.

This deficiency affected all smoke compartments. Failure to comply with minimum standards as referenced increases the risk of death or injury due to fire and/or smoke.

4. Upon disclosure of the concern identified in the statement of the deficiency, no other required inspections or service to the facility's dry sprinkler system pertaining to this specific tag were found to be out of compliance.

5. The maintenance director or designee will store the 5 year sprinkler inspection records and any required repair or service pertaining to this inspection on site and continue to ensure that all required routine inspections and service to the facility dry sprinkler system is completed.

The maintenance director or designee will ensure that all sprinkler system supervisory signals will continue to not be silencable permanently except by reopening/restoration of the valve.

6. Results of the findings will be evaluated and reported monthly to the Quality Assurance Committee by the

Generators inspected weekly and exercised under load for 30 minutes per month and shall be in accordance with NFPA 99 and NFPA 110, 3-4.4.1 and 8-4.2 (NFPA 99), Chapter 6 (NFPA 110). This STANDARD is not met as evidenced by:

Based on observations, on 1/26/2016 at approximately 8:30 AM onward, the following deficiencies were noted: The emergency generator was non-compliant, specific findings include: The emergency generator located on the exterior of the building has no remote manual stop switch located outside and away from the generator set location for use in case of an emergency.

Reference NFPA 101, 110, 3-5.5.6 All level 1 and level 2 installations shall have a remote manual stop station of a type similar to a break-glass station located outside the room housing the prime mover, where so installed, or located elsewhere on the premises where the prime mover is located outside the building.

This deficiency affected all smoke compartments. Failure to comply with minimum standards as referenced increases the risk of death or injury.

1. Upon disclosure of the concern through the Life Safety survey process, the maintenance director identified that the facility's emergency generator does not have an remote emergency stop button installed that is mounted away generator. The maintenance director has requested a proposal for installation of this remote emergency stop button from the electrical contractor, Salem Electric. Once the proposal was given by the contractor, the installation of the remote emergency stop button is scheduled to be completed on June 22, 2016. The maintenance director ordered a notification sign for this emergency stop button on June 13, 2016. This sign will be placed in close vicinity to the emergency stop button after installation is complete.

2. Upon disclosure of the concern identified in the statement of the deficiency, no other required service to
