A Life Safety Code (LSC) survey was conducted as per The Code of Federal Register at 42CFR 483.70(a); using the 2000 Existing Health Care section of the LSC and its referenced publications. The facility is utilizing delayed egress locking systems. In the exit conference all deficiencies noted were discussed and acknowledged with administration.

Stories: Five
Construction Type: II (222)
 Constructed: 1973
Fully Sprinkled - Yes
At time of survey the:
Total Certified Bed Count = 230
Census = 199

The requirement at 42 CFR, Subpart 483.70(a) is NOT MET as evidenced by:

K 029
SS=E
NFPA 101 LIFE SAFETY CODE STANDARD

One hour fire rated construction (with o hour fire-rated doors) or an approved automatic fire extinguishing system in accordance with 8.4.1 and/or 19.3.5.4 protects hazardous areas. When the approved automatic fire extinguishing system option is used, the areas are separated from other spaces by smoke resisting partitions and doors. Doors are self-closing and non-rated or field-applied protective plates that do not exceed 48 inches from the bottom of the door are permitted. 19.3.2.1

This STANDARD is not met as evidenced by:
42 CFR 483.70 (a)

Based on observations, and staff interviews on 7/6/2016, at approximately 9:30 AM onward, the

**K038**
1. No residents affected with practice. No potential residents affected with this practice as area is a employee designated area only.
2. Immediate corrective action-Maintenance director notified Simplex.

**K061**
1. No resident affected with practice, all residents have potential to be affected.
2. Immediate corrective action-Administrator notified Simplex.
The facility maintenance and inspection of the sprinkler system was non-compliant, specific findings include:
The supervisory signal for the electronically supervised tamper alarm on the sprinkler control valve at the Fire Alarm Control Panel (FACP) could be silenced permanently when the valve was in the closed position in the sprinkler riser room. Supervisory signals shall not be silenced permanently except by reopening/restoration of the valve to the normal operating position.

This deficiency affects the entire facility.

Ref: 2000 NFPA 101 Section 19.7.6; 9.7.2.1

Grinnell and service arranged for 7/19/2016 to repair supervisory signal/alarm at the fire panel.

3. Measures/systems to assure ongoing compliance-facility has ongoing partnership with Simplex Grinnell and Administrator to request monthly/quarterly reports on all systems to review at monthly Quality Assurance.

K 144

Generators inspected weekly and exercised under load for 30 minutes per month and shall be in accordance with NFPA 99 and NFPA 110. 3-4.4.1 and 8-4.2 (NFPA 99), Chapter 6 (NFPA 110)

This STANDARD is not met as evidenced by:
42 CFR 483.70 (a)

Based on observations, and staff interviews on 7/6/2016, at approximately 9:30 AM onward, the following deficiencies were noted:

The facility maintenance and inspection of the emergency power source was non-compliant, specific findings include:
The facility emergency generator is currently offline and the fire pump generator is caring the load for the facility in the event of total facility loss of power. The emergency circuit is not currently automatic and must be manually transferred in

1. No residents affected by practice, all residents have potential to be affected.

2. Immediate corrective action:
Administrator notified Life Safety Inspector and received approval for temporary solution with fire pump generator. Currently in the process of gathering estimates/quotes for replacement with a new generator. As soon as contract signed and permit work started-Administrator will send to DHHS/ of correction for the generator at facility is as follows, facility has been working on
