K 000 INITIAL COMMENTS

This Life Safety Code (LSC) survey was conducted utilizing the 2012 edition of the National Fire Protection Association (NFPA) 101 - Life Safety Code (LSC) and 2012 edition of the NFPA 99 - Health Care Facilities Code (HCFC) and its referenced publications. The facility plan/construction approval occurred prior to July 5, 2016. The facility is utilizing special locking systems. In the exit conference all LSC deficiencies noted were discussed and acknowledged with Administration.

Stories: One
Construction Type: V(111)
Constructed: 5/1/1981
Fully Sprinkled YES
At time of survey the Licensed bed capacity = 120
Total Certified Bed Count = 120
Census = 109

K 211 Means of Egress - General

Means of Egress - General
Aisles, passageways, corridors, exit discharges, exit locations, and accesses are in accordance with Chapter 7, and the means of egress is continuously maintained free of all obstructions to full use in case of emergency, unless modified by 18/19.2.2 through 18/19.2.11. 18.2.1, 19.2.1, 7.1.10.1
This REQUIREMENT is not met as evidenced by:
Based on observations, staff interview, and/or documentation on 11/15/2017 at 12:00 PM through 3:30 PM the following deficiencies were noted: The standard is non-compliant, specific findings include:

K211 The dumpster blocking the concrete egress walkway, located near the dumpster pad and 2 large above ground gas tanks, was moved to clear/create the

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patients. (See instructions.) Except for nursing homes, the findings stated above are disclosable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are disclosable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is requisite to continued program participation.
**Summary Statement of Deficiencies**

(Each Deficiency Must Be Preceded by Full Regulatory or LSC Identifying Information)

1. The facility had an outside large metal dumpster sitting on and blocking the required concrete egress walkway to the public way; the walkway was next to the dumpster pad and 4 main metal outside garbage dumpsters and the 2 large outside above ground gas tanks.

This deficiency affected 1 of 7 smoke compartments.

Failure to comply with minimum standards as referenced increases the risk of death due to smoke and or fire.

K 222 12/30/17

**Egress Doors**

**CFR(s): NFPA 101**

Egress Doors

Doors in a required means of egress shall not be equipped with a latch or a lock that requires the use of a tool or key from the egress side unless using one of the following special locking arrangements:

**CLINICAL NEEDS OR SECURITY THREAT LOCKING**

Where special locking arrangements for the clinical security needs of the patient are used, only one locking device shall be permitted on each door and provisions shall be made for the rapid removal of occupants by: remote control of locks; keying of all locks or keys carried by staff at
K 222 Continued From page 2

all times; or other such reliable means available to the staff at all times.

18.2.2.2.5.1, 18.2.2.2.6, 19.2.2.2.5.1, 19.2.2.2.6

SPECIAL NEEDS LOCKING ARRANGEMENTS

Where special locking arrangements for the safety needs of the patient are used, all of the Clinical or Security Locking requirements are being met. In addition, the locks must be electrical locks that fail safely so as to release upon loss of power to the device; the building is protected by a supervised automatic sprinkler system and the locked space is protected by a complete smoke detection system (or is constantly monitored at an attended location within the locked space); and both the sprinkler and detection systems are arranged to unlock the doors upon activation.

18.2.2.2.5.2, 19.2.2.2.5.2, TIA 12-4

DELAYED-EGRESS LOCKING ARRANGEMENTS

Approved, listed delayed-egress locking systems installed in accordance with 7.2.1.6.1 shall be permitted on door assemblies serving low and ordinary hazard contents in buildings protected throughout by an approved, supervised automatic fire detection system or an approved, supervised automatic sprinkler system.

18.2.2.2.4, 19.2.2.2.4

ACCESS-CONTROLLED EGRESS LOCKING ARRANGEMENTS

Access-Controlled Egress Door assemblies installed in accordance with 7.2.1.6.2 shall be permitted.

18.2.2.2.4, 19.2.2.2.4

ELEVATOR LOBBY EXIT ACCESS LOCKING ARRANGEMENTS

Elevator lobby exit access door locking in accordance with 7.2.1.6.3 shall be permitted on

<td>door assemblies in buildings protected throughout by an approved, supervised automatic fire detection system and an approved, supervised automatic sprinkler system. 18.2.2.2.4, 19.2.2.2.4 This REQUIREMENT is not met as evidenced by: Based on observations, staff interview, and/or documentation on 11/15/2017 at 12:30 PM through 3:30 PM the following deficiencies were noted: The standard is non-compliant, specific findings include: 1. The facilities freezer inside door handle was not a type that can be seen in low light levels and the shelf was pushed against the emergency screw off black handle so tight and the handle was frozen such that the screw off release handle would not function as designed. The refrigerator inside handle was also a type that cannot be seen in low light levels. 2012 NFPA 101, 19.2.2.2.5, 19.2.2.2.6 This deficiency affected 1 of 7 smoke compartments. Failure to comply with minimum standards as referenced increases the risk of death due to exposure to freezing temperatures.</td>
<td>K222</td>
<td>Inside freezer handle in kitchen area repaired door handle was replaced by the Maintenance Director with a type that is visible in low light levels; shelf pushed against the handle was also repositioned to allow the current handle to operate correctly. Maintenance Director conducted 100% audit of all other walk in freezer and refrigerator doors, no other doors were found to be affected by the alleged deficient practice. All kitchen staff will be educated by the Maintenance Director or Designee, so they understand the importance of not blocking door handles with shelves or other items in the walk in freezers and refrigerators. Maintenance director will audit/monitor all freezer and refrigerator doors monthly for 3 months, remedy any further adverse findings immediately and report any findings monthly to the Administrator or Designee. Results of the audits will be documented, discussed and reviewed at the monthly QA meetings until no further issues are noted or the next annual Life Safety Survey.</td>

Hazardous Areas - Enclosure

Hazardous areas are protected by a fire barrier having 1-hour fire resistance rating (with 3/4 hour fire rated doors) or an automatic fire extinguishing system in accordance with 8.7.1 or 19.3.5.9. When the approved automatic fire extinguishing system option is used, the areas shall be separated from other spaces by smoke resisting partitions and doors in accordance with 8.4. Doors shall be self-closing or automatic-closing and permitted to have nonrated or field-applied protective plates that do not exceed 48 inches from the bottom of the door.

Describe the floor and zone locations of hazardous areas that are deficient in REMARKS. 19.3.2.1, 19.3.5.9

Area Automatic Sprinkler Separation N/A

a. Boiler and Fuel-Fired Heater Rooms
b. Laundries (larger than 100 square feet)
c. Repair, Maintenance, and Paint Shops
d. Soiled Linen Rooms (exceeding 64 gallons)
e. Trash Collection Rooms (exceeding 64 gallons)
f. Combustible Storage Rooms/Spaces (over 50 square feet)
g. Laboratories (if classified as Severe Hazard - see K322)

This REQUIREMENT is not met as evidenced by:

Based on observations, staff interview, and/or documentation on 11/15/2017 at 12:30 PM through 3:30 PM the following deficiencies were noted: The standard is non-compliant, specific findings include:

1. The facilities corridor laundry room door had a wood wedge to ensure the self closing mechanism latched and self closed completely; wood wedge was removed immediately to allow the self closing mechanism to release the door and self
### K 321

Continued From page 5

Wood wedge holding the doors open and these doors when tested for self closing and latching would not self close and latch.

2012 NFPA 101, 19.3.2.1, 8.7, 8.4

This deficiency affected 1 of 7 smoke compartments. Failure to comply with minimum standards as referenced increases the risk of death due to smoke and or fire.

Close.

Maintenance Director conducted 100% audit of all other doors in the facility with self closures and found no other doors affected by the deficient practice. All laundry and housekeeping staff will be educated, by the Maintenance Director or Designee, to ensure they do not use wood wedges to block doors from closing and latching.

Maintenance director will audit/monitor all doors equipped with self closing mechanisms, monthly for 3 months, remedy any further adverse findings immediately and report any findings monthly to the Administrator or Designee. Results of the audits will be documented, discussed and reviewed at the monthly QA meetings until no further issues are noted or the next annual Life Safety Survey.

**Electrical Systems - Essential Electric System**

CFR(s): NFPA 101

Electrical Systems - Essential Electric System Maintenance and Testing

The generator or other alternate power source and associated equipment is capable of supplying service within 10 seconds. If the 10-second criterion is not met during the monthly test, a process shall be provided to annually confirm this capability for the life safety and critical branches. Maintenance and testing of the generator and transfer switches are performed in accordance with NFPA 110.

Generator sets are inspected weekly, exercised under load 30 minutes 12 times a year in 20-40 day intervals, and exercised once every 36

be provided to operate outside of the generating room in a location readily observed by operating personnel at a regular work station. The annunciator shall be hard wired to indicate alarm conditions of the emergency or auxiliary power source as follows:

(1) Individual visual signals shall indicate the following:
   a. When the emergency or auxiliary power source is operating to supply power to load
   b. When the battery charger is malfunctioning

(2) Individual visual signals plus a common audible signal to warn of an engine-generator alarm condition shall indicate the following:
   a. Low lubricating oil pressure
   b. Low water temperature (below those required in 6.4.1.1.11)
   c. Excessive water temperature
   d. Low fuel when the main fuel storage tank contains less than a 4-hour operating supply
   e. Overcrank (failed to start)
   f. Overspeed

A remote, common audible alarm shall be provided as specified in 6.4.1.1.17.4 that is powered by the storage battery and located outside of the EPS service room at a work site observable by personnel. [110: 5.6.6]

This deficiency affected 1 of 7 smoke compartments.
Failure to comply with minimum standards as referenced increases the risk of death due to loss of emergency generator power supply.
