F 246  Continued from page 2
water provided at bedside. On 10/23/13
at 2:30 PM Resident #1 was in bed,
water was out of reach and no cup
available. On 10/24/13 at 8:25 AM, Resident
#1 was in dining room eating breakfast
independently with tomato juice, orange
juice, coffee and milk provided for fluids.

During an interview with NA #1 on
10/23/13 at 9:55 AM indicated that he was
not aware of how often fresh water was
provided to the residents, he indicated
that he was new and would find out the
information. NA #1 later revealed that
fresh water is provided every shift and as
needed.

During an interview with the CMA #1 on
10/24/13 at 1:40 PM revealed that
resident care needs and changes are
communicated during report at shift change
and on the RCS sheets (Resident Care
Specialist Assignment Sheets). CMA #1
further indicated that extra fluids are
provided to Resident #1 because he is a
dehydration risk and it is noted on the
MAR to provide 6 ounces of fluids four
times a day with medications.

The DON indicated during an interview
on 10/24/13 at 2:00 PM that her
effectations were that the residents
should have fresh water provided and in reach
every shift and as needed unless they
have fluid restrictions or have thickened
liquids. She further indicated that
Resident #1 has a tendency to poor his water
out in the floor.
2. Resident #52 was admitted to the facility on 2/12/13 with the diagnosis including Pneumonia, Diabetes, Hypertension and Stroke.

    The MDS dated 6/8/13 assessed Resident #52 as requiring total assistance with ADL’s (Activity of Daily Living), Incontinent of bowel and bladder and unable to walk. Resident had some impairment with recall of month and year, no problems with recall.

    Resident #52’s care plan dated 2/28/13 for problems of falls and transfers included an approach to keep call light in reach.

    During an observation on 10/22/13 at 10:57 AM the bell was noted to be attached to right side rail and hanging down to floor. On 10/23/13 at 1:05 PM the bell was draped over the top of the right side rail and extended below the bottom of the rail with the flat part of the bell resting on the seat of a chair beside the bed. The resident was turned to the right, but the bell was out of her reach. On 10/24/13 at 1:00 PM the call light was draped over bottom of the side rail and the call light was out of Resident #52’s reach.

    An interview with NA #2 on 10/24/13 at 1:41 PM revealed that she was not sure if Resident #52 could use her call light and that staff go in room and anticipate her needs, she has never known resident to use...
STATEMENT OF DEFICIENCIES AND PLAN OF CORRECTION

F 246 Continued From page 4

The call light and further indicated that she normally puts the call light beside her on the bed, but did not when she repositioned her at lunch.

3. Resident #58 was admitted to the facility on 8/31/10 with diagnosis including Stroke, Hypertension, Chronic Kidney Disorder and Hemiplegia.

The MDS dated 8/1/13 assessed the resident as requiring extensive assistance of one person for ADL's. Resident had some memory impairment with short and long term memory.

The care plan dated 6/6/13 revealed a problem of falls and included an approach to “Place the call light within reach”.

A problem dated 6/6/13 for Potential for injury, impaired ability to self transfer related to weakness, gait/balance, history of falls, mental status and status post cerebral vascular accident included an approach to place call light within reach, encourage resident to obtain assistance for transfers.

During an observation on 10/21/13 at 1:45 PM revealed Resident #58’s call light to be hanging behind his bed and not in reach. On 10/22/13 at 9:19 AM the call light was out of reach and sitting on room mates bed side table. At 11:18 AM on 10/22/13 the call light was still out of reach and sitting on room mates bedside table, Resident #58 indicated during this time that he could not reach the

call light and he would yell for help if needed.

During an observation on 10/23/13 at 1:06 PM revealed the call light was on the left side of the mattress beside the resident. Interview with the visitor revealed she had asked staff to place the call light on the bed. The call light had been on the floor, out of residents reach. Interview with the visitor revealed this happens often when she visited and she visits a few times a week.

Observation on 10/24/13 at 7:58 AM revealed Resident #58 had his call light hanging from the side rail and was out of reach.

During an interview with NA #2 on 10/24/13 at 1:41 PM revealed that Resident #58 does use his call light when he wants water. He can reach it if it is kept on his bed or on the chair beside his bed.

An interview with the DON on 10/24/13 at 3:30 PM revealed that her expectations were that call lights should be kept in reach for residents.

F 371 483.35(1) FOOD PROCURE,
SS=E
STORE/PREPARE/SERVE - SANITARY

The facility must:
(1) Procure food from sources approved or considered satisfactory by Federal, State or local authorities; and
(2) Store, prepare, distribute and serve food under sanitary conditions.
This REQUIREMENT is not met as evidenced by:
Based on observations and staff interviews the facility failed to remove expired single serving milk cartons from use in the walk in refrigerator, failed to date food when opened and failed to store opened food items to keep out air in the walk in refrigerator, walk in freezer and dry storage area.

The findings included:

Observations on 10/21/13 at 10:30 AM with the dietary manager revealed 31 of 33 single serving milk cartons had expired on 10/20/13. The milk cartons were stored in two milk crates ready for use in the walk in refrigerator. The dietary manager removed the expired milk with signage indicating staff was not to use the milk.

Interview on 10/21/13 at 10:35 AM with the dietary manager revealed the milk should be checked each day and expired milk should be removed from use.

Observations on 10/21/13 at 10:33 AM with the dietary manager revealed a ziplock bag of cheese had been opened, and was not wrapped, nor was the zip lock bag secured to prevent the food from being open to air. A box of processed cheese had been opened. The lid to the box was not secured and the cheese had not been wrapped to prevent the food from being open to air. Two zip lock bags of sandwiches and a cup of peaches were not dated.

The facility will continue to strive to store, prepare, distribute and serve food under sanitary conditions.

On 10/21/12, the Dietary Manager removed 31 cartons of milk from the walk in refrigerator

On 10/21/13 the Dietary Manager removed and disposed of one zip lock bag of cheese, box of processed cheese, two zip lock bagged sandwiches, cup of peaches, zip lock bag of frozen French toast and three zip lock bags of opened cereal.

On 10/21/13, the Dietary Manager cleaned the meat slicer.

The facility dietary staff was provided re-educated regarding procedure for checking and removing items that are identified with expired dates. The staff were also provided re-education regarding labeling, dating and ensuring that items are placed in air tight sealed bag or containers when not in use. Education provided by Dietary Manager on 10/22/13. Newly hired dietary staff will be provided education during orientation.

Dietary Manager or facility cook will complete kitchen inspection daily to ensure that products are being used prior to expiration date and expired items have been disposed of times thirty days.

 Continued From page 9

Interviews with staff, the facility failed to follow infection control practices to prevent cross contamination for 1 of 1 resident (Resident #91) on contact precautions.

Findings included:

The Contact Precautions policy dated 2012 stated, "It is the intent of this facility to use contact precautions in addition to standard precautions for residents known or suspected to have serious illnesses easily transmitted by direct resident contact or by contact with items in the resident 's environment." It further stated, "Gloves should be worn when entering the room and while providing care for the resident. Gloves should be removed before leaving the resident's room and hand hygiene should be performed immediately."

The Clostridium difficile (c-diff disease) fact sheet dated 2012 stated, "Wash hands with soap and water. Do not use an alcohol hand rub."

Resident #91 was admitted on 4/30/13. Her diagnoses included chronic obstructive pulmonary disease and clostridium difficile.

The physician assessment dated 10/3/13 indicated the resident was noted with multiple loose stools on 10/2/13, had a history of clostridium difficile, and was placed on contact isolation.

The lab report dated 10/3/13 indicated Resident #91 was positive for clostridium difficile and stated, "Initiate contact isolation if patient is in a healthcare setting."

The physician assessment dated 10/22/13 stated...

The facility will continue to strive to establish and maintain an Infection Control Program designed to provide a safe, sanitary and comfortable environment and to help prevent the development and transmission of disease and infection.

Resident #91 reviewed on 10/25/13 by attending physician and found no longer to require contact precautions.

Nurse #1 was provided re-education on 10/25/13 by facility DON regarding equipment required to adhere to contact precautions and appropriate hand washing.

The facility staff were provided re-education regarding procedure for adhering to contact precautions on 10/28/13 and completed on 11/4/13 by DON and Weekend Coordinator.

The facility DON and Weekend Coordinator will complete I-2 random observation of care being provided to residents identified with contact precautions times four weeks and bi-monthly times one.
F 441  Continued From page 10

Resident #91 was "currently on Vancomycin second to c-diiff collites" and should "continue Vancomycin and monitor."

The nurse's note dated 10/22/13 stated Resident #91 "had some loose stool this am."

On 10/23/13 at 11:22 am Nurse #1 was observed entering Resident #91's room. The resident was receiving a nebulizer treatment. A cart of personal protective equipment was in the hallway to the left of the door, and a contact precautions sign was on the door. The nurse went into the room, was not wearing gloves, took the nebulizer mask off the resident, rinsed out the medication reservoir, and stored the mask, reservoir and tubing. The nurse did not wash her hands or use hand sanitizer. Nurse #1 pushed the resident in her wheelchair out of the room and down the hallway while simultaneously pulling the medication cart behind her. She left the medication cart at the nurse's station and continued to push Resident #91 down the hallway to the main dining room.

During an interview on 10/23/13 at 11:26 am Nurse #1 stated, "I should have worn gloves to take off and rinse her mask and should have washed my hands after disconnecting her [nebulizer]. I did not do that, but am going to do that now."

During an interview on 10/23/13 at 11:32 am the Director of Nursing indicated she was the coordinator of the facility's infection control program, would expect staff to wear gloves when providing care for a resident on contact precautions, and expect staff to wash their hands with soap and water after providing care.

F 441  The facility DON will report findings on observation to Quality Improvement Committee weekly times four and bi monthly times one.

INITIAL COMMENTS

This Life Safety Code (LSC) survey was conducted as per The Code of Federal Register at 42 CFR 483.70(a); using the 2000 Existing Health Care section of the LSC and its referenced publications. This facility is Type V (111) protected construction utilizing North Carolina Special locking arrangements, and is equipped with a complete automatic sprinkler system.

CFR#: 42 CFR 483.70 (a)

K 012
NFPA 101 LIFE SAFETY CODE STANDARD

Building construction type and height meets one of the following. 19.1.6.2, 19.1.6.3, 19.1.6.4, 19.3.5.1

This STANDARD is not met as evidenced by:
Based on the observations and staff interviews on 11/14/2013 the following Life Safety Item was observed as noncompliant, specific findings include: There as a hole behind the door to the 200 hallway unit manager office where the door knob was hitting the wall.

K 029
NFPA 101 LIFE SAFETY CODE STANDARD

One hour fire rated construction (with 1/2 hour fire-rated doors) or an approved automatic fire extinguishing system in accordance with 8.4.1 and/or 19.3.5.4 protects hazardous areas. When the approved automatic fire extinguishing system option is used, the areas are separated from other spaces by smoke resisting partitions and

K 032
Correction for the alleged deficient practice noted as "hole behind the door to the 200 hallway unit manager office where door knob was hitting wall" was immediate repair of the noted hole. A door stop was installed to prevent future occurrence. The Maintenance Director surveyed the remainder of the building to locate and repair any other instances with any negative findings reported immediately to the Administrator. The Maintenance Director will continue with this type survey monthly for the next three months with a summary of all these findings presented to and discussed during these corresponding monthly Safety Committee meetings. Reviews will then continue quarterly thereafter until next annual survey. Completion date of 11/15/2013

K 029
Correction for the alleged deficient practice noted as "unseated penetration in the rated ceiling in the dry storage room around the second sprinkler head" was to seal around affected head with an appropriate sealant to restore proper ceiling rating. The Maintenance Director will do a walk through of the remainder of the building to locate any other unseated penetrations in rated ceilings and repair upon discovery. The Maintenance Director will do monthly checks for the next three months to maintain continued compliance and report all findings for discussion at those corresponding Safety Committee meetings. Reviews will then continue quarterly thereafter until next annual survey. Completion date of 11/15/2013

K 038
Correction for alleged deficient practice noted as " mean of egress leading to the service hallway in both directions was reduced from 8 feet by plastic construction dust control barriers." – was immediate removal of barriers. The Maintenance Director will assess and determine appropriate dust control in future to maintain proper 8 feet of clearance for egress if needed in any corridor. All determinations will be presented to the Safety Committees and facility's Div Dir of Facility Engineering to input and discussion before proceeding with barriers for dust control and maintaining proper egress. Correction date of 11/14/2013

(008) DATE
Administrative

LINDA L. WINGATE

Any deficiency statement ending with an asterisk (*) denotes a deficiency which the institution may be excused from correcting providing it is determined that other safeguards provide sufficient protection to the patient. (See instructions.) Except for nursing homes, the findings stated above are dischargeable 90 days following the date of survey whether or not a plan of correction is provided. For nursing homes, the above findings and plans of correction are dischargeable 14 days following the date these documents are made available to the facility. If deficiencies are cited, an approved plan of correction is required to continued program participation.
