

State-approved Curriculum
NURSE AIDE I TRAINING PROGRAM
July 2019
Module T

North Carolina Department of Health and Human Services
Division of Health Service Regulation
Health Care Personnel Education and Credentialing Section
NCDHHS is an equal opportunity provider and employer.

Module T – Dementia and Alzheimer’s Disease Teaching Guide

Objectives

- Define the terms, dementia, Alzheimer’s disease, and delirium
- Describe the nurse aide’s role in the care of the resident with Alzheimer’s

Advance Preparation – In General

- Review curriculum and presentation materials
- Add examples or comments in Notes Section
- Set up computer/projector

Advance Preparation – Teaching Tips – Instructional Resources/Guest Speakers

- **#1T DVD:** Consider procuring the DVD, *Still Alice*, on Alzheimer's disease. Alice has early-onset Alzheimer’s, a form of the disease that is far rarer and more catastrophic often afflicting victims in their prime (Alice is 50). Watching her lose a word in an early lecture before an audience of her peers, then become completely disoriented during a routine run in the park, is to stumble with her in a journey toward disintegration that is terrifyingly real. The DVD, *Still Alice* can be purchased online.
- **#2T Guest Speaker:** employee from a local Alzheimer’s unit; topic: speak about characteristics and care of residents with Alzheimer’s disease

**Module T – Dementia and Alzheimer’s Disease
Definition List**

Activity-based Care – care focused on assisting resident to find meaning in his or her day, rather than doing activities just to keep the person busy

Alzheimer’s disease (AD) – is a progressive disease characterized by a gradual decline in memory, thinking and physical ability, over several years

Behavior – how a person acts

Catastrophic Reactions – out-of-proportion, extreme responses to activities or situations

Cognition – ability to think quickly and logically

Confusion – inability to think clearly, causing disorientation and trouble focusing

Delirium – a state of severe confusion that occurs suddenly and is usually reversible

Delusion – a false belief

Dementia – usually progressive condition marked by development of multiple cognitive deficits, such as memory impairment, aphasia, and inability to plan and initiate complex behavior

Depression – a loss of interest in usual activities

Dignity – respect and honor

Doing Activities – activities that keep the person busy

Independence – ability to make decisions that are consistent, reasonable and organized; having the ability to perform activities of daily living without assistance

Irreversible – disease or condition that cannot be cured

Meaningful Activities – have value to the resident with dementia

Onset – the time when signs and symptoms of a disease begins

Paranoia – an extreme or unusual fear

Progressive – the way a disease advances

Quality of Life – overall enjoyment of life

Respect – treated with honor, show of appreciation and consideration

Sundowning – increased agitation, confusion and hyperactivity that begins in the late afternoon and builds throughout the evening

Trigger – an event that causes other events

Wandering – moving about the facility with no purpose and is usually unaware of safety

Module T – Dementia and Alzheimer’s Disease	
<p>(S-1) Title Slide (S-2) Objectives</p> <ol style="list-style-type: none"> 1. Define the terms dementia, Alzheimer’s disease, and delirium. 2. Describe the nurse aide’s role in the care of the resident with Alzheimer’s disease. 	
Content	Notes
<p>(S-3) Dementia</p> <ul style="list-style-type: none"> • Usually progressive condition marked by development of multiple cognitive deficits such as memory impairment, aphasia, and inability to plan and initiate complex behavior 	
<p>(S-4) Types of Dementia</p> <ul style="list-style-type: none"> • Alzheimer’s disease – most common cause of dementia. Thought to be caused by clumps of proteins (referred to as tangles) in the brain • Vascular dementia – can occur when blood circulation to the brain decreases as a result of a stroke or another problem, damaging blood vessels in the brain • Dementia with Lewy bodies – deposits of protein that develop throughout the brain. These protein deposits damage and kill nerves in the brain over time. • Mixed dementia - 	
<p>(S-5) Alzheimer’s Disease</p> <ul style="list-style-type: none"> • Progressive disease • Gradual decline in memory, thinking and physical ability over several years • Average life span in 8 years, but survival may be from 3 to 20 years • Progressive into 7 stages 	
<p>(S-6) Alzheimer’s Disease – Stage 1 – No Impairment</p> <ul style="list-style-type: none"> • Alzheimer’s disease is not evident • No memory problems 	
<p>(S-7) Alzheimer’s Disease – Stage 2 – Very Mild Decline</p> <ul style="list-style-type: none"> • Minor memory problems • Lose things around the house • Unlikely to be noticed by family members 	
<p>(S-8) Alzheimer’s Disease – Stage 3 – Mild Decline</p> <ul style="list-style-type: none"> • Family members and friends may begin to notice cognitive problems • Difficulty finding the right word during conversations • Difficulty organizing and planning • Difficulty remembering names of new individuals 	

Module T – Dementia and Alzheimer’s Disease	
<p>(S-9) Alzheimer’s Disease – Stage 4 – Moderate Decline</p> <ul style="list-style-type: none"> • Difficulty with simple math • Poor short-term memory (may not recall what they ate for lunch) • Inability to manage finances 	
<p>(S-10) Alzheimer’s Disease – Stage 5 – Moderately Severe Decline</p> <ul style="list-style-type: none"> • Maintain functionality • Usually able to bathe and toilet independently • Still know their family members • Difficulty dressing appropriately • Inability to recall simple details, such as their own address or telephone number • Significant confusion 	
<p>(S-11) Alzheimer’s Disease – Stage 6 – Severe Decline (1)</p> <ul style="list-style-type: none"> • Need constant supervision, usually require professional care • Confusion or unawareness of environment and surroundings • Inability to remember most details of personal history • Loss of bladder and bowel control 	
<p>(S-12) Alzheimer’s Disease – Stage 6 – Severe Decline (2)</p> <ul style="list-style-type: none"> • Major personality changes • Possible behavior problems • Need assistance with bathing and toileting • Wandering 	
<p>(S-13) Alzheimer’s Disease – Stage 7 – Very Severe Decline</p> <ul style="list-style-type: none"> • Final stage and nearing death • Lose ability to communicate or respond to their environment • May be able to utter words or phrases • No awareness regarding their condition • Need assistance with all activities of daily living • May lose their ability to swallow 	
<p>(S-14) Delirium</p> <ul style="list-style-type: none"> • State of severe sudden confusion that is usually reversible • Triggered by acute illness or change in physical condition • Can be life threatening if not recognized and treated • Symptoms of delirium <ul style="list-style-type: none"> ○ Rapid decline in cognitive function (ability to think) 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ Increased confusion ○ Disorientation to place and time ○ Decreased attention span ○ Poor short-term memory and immediate recall ○ Poor judgment ○ Restlessness ○ Altered level of consciousness ○ Suspiciousness ○ Hallucinations, delusions ● Notify nurse and stay with resident ● Communicating with a resident who is showing signs of delirium <ul style="list-style-type: none"> ○ Stay calm ○ Keep voice at a normal volume; do not shout ○ Use resident’s name ○ Speak clearly in simple sentences ○ Use facial expressions and body language to aid in understanding ○ Reduce distractions in the environment, such as turning down TV or closing curtains to block bright sunlight 	
<p>(S-15) Dementia or Delirium?</p> <ul style="list-style-type: none"> ● Delirium and dementia are often confused ● Remember, delirium is sudden, severe, and usually reversible; dementia is progressive and irreversible ● A resident who has dementia may experience delirium; immediately report any sudden change in behavior or a sudden increase in behaviors associated with dementia to the nurse – a resident with dementia may be experiencing delirium 	
<p>(S-16) Dementia and Alzheimer’s Disease – Key Terms</p> <ul style="list-style-type: none"> ● Cognition – ability to think quickly and logically ● Confusion – inability to think clearly, causing disorientation and trouble focusing ● Irreversible – disease or condition that cannot be cured ● Onset – the time when signs and symptoms of a disease begins ● Progressive – the way a disease advances 	
<p>(S-17) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> ● Dignity – respect and honor ● Independence – ability to make decisions that are consistent, reasonable and organized; having the ability to perform activities of daily living without assistance ● Quality of life – overall enjoyment of life 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> • Respect – treated with honor, show of appreciation and consideration 	
<p>(S-19) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> • Every human being is unique and valuable, therefore, each person deserves understanding and respect • Dementia does not eliminate this basic human need • Person-centered care maintains and supports the person regardless of level of dementia 	
<p>(S-20) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> • Residents’ abilities, interests, and preferences should be considered when planning activities and care • As the disease progresses, adjustments will be required in order to maintain dignity • Important for staff to know who the resident was before the dementia started 	
<p>(S-21) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> • An individual’s personality is created by his/her background, including <ul style="list-style-type: none"> ○ Ethnic group membership (race, nationality, religion) ○ Cultural or social practices ○ Environmental influences, such as where and how they were raised as children ○ Career choices ○ Family life ○ Hobbies 	
<p>(S-22) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> • Encourage residents to participate in activities and daily care, but avoid situations where resident is bound to fail • Humiliation is disrespectful, degrading, and can increase likelihood of disruptive behaviors • To promote independence, do things with resident rather than for them 	
<p>(S-23) Maintenance of Respect, Dignity and Quality of Life</p> <ul style="list-style-type: none"> • Allow time for residents to express feelings and take time to understand what they are feeling • Provide emotional support • Long-term care facilities must provide care for residents in a manner and an environment that promotes maintenance or enhancement of each resident’s dignity, 	

Module T – Dementia and Alzheimer’s Disease	
respect, and quality of life	
<p>(S-24) Dementia and Alzheimer’s Disease – Communication</p> <ul style="list-style-type: none"> • Residents with Alzheimer’s disease often experience problems in making wishes known and in understanding spoken words • Communication becomes more difficult as time goes by • Changes commonly seen in the resident with Alzheimer’s <ul style="list-style-type: none"> ○ Inability to recognize a word, phrase ○ Inability to name objects ○ Using a general term instead of specific word ○ Getting stuck on ideas or words and repeating them over and over ○ Easily losing a train of thought ○ Using inappropriate, silly, rude, insulting or disrespectful language during conversation ○ Increasingly poor written word comprehension ○ Gradual loss of writing ability ○ Combining languages or return to native language ○ Decreasing level of speech and use of select words, which may also cause the use of nonsense syllables ○ Reliance on gestures rather than speech 	
<p>(S-25) Communicating with Resident with Dementia and Alzheimer’s Disease – Nurse Aide’s Role</p> <ul style="list-style-type: none"> • There are several components when assisting resident with communication <ul style="list-style-type: none"> ○ Patience with resident ○ Show interest in the subject ○ Offer comfort and reassurance ○ Listen for a response ○ Avoid criticizing or correcting ○ Avoid arguments with resident ○ Offer a guess as to what resident wants ○ Focus on the feelings, not on the truth ○ Limit distractions ○ Encourage non-verbal communication 	
<p>(S-26-27) Dementia and Alzheimer’s Disease – Communication Techniques Used by Nurse Aide</p> <ul style="list-style-type: none"> • Nurse aide’s method of communicating with the resident with Alzheimer’s disease is as critical as the actual communication • Utilizing the following techniques will decrease frustration for both the resident and nurse aide <ul style="list-style-type: none"> ○ Obtain resident’s attention before speaking and maintain attention while speaking 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ Address resident by name, approach slowly from front or side and get on same level or height as resident ○ Set a good tone by using calm, gentle, low-pitched tone of voice ○ If conversation is interrupted or nurse aide or resident leaves room, start over from beginning ○ Slow down, do not act rushed or impatient ○ If information needs to be repeated, do so using same words and phrases as before ○ Speak clearly and distinctly using short, familiar words and short sentences, and avoiding long explanations ○ Emphasize key words, break tasks and instructions into clear and simple steps, offer one step at a time; and provide resident time and encouragement to process and respond to requests ○ Use nonverbal cues, such as touching, pointing or starting the task for resident ○ If the resident’s speech is not understandable, encourage to point out what is wanted or needed 	
<p>(S-28) Dementia and Alzheimer’s Disease – Communication Strategies Used by Nurse Aide</p> <ul style="list-style-type: none"> ● Communication strategies to use when communicating with residents that have dementia <ul style="list-style-type: none"> ○ Listen carefully and encourage them; do not talk down to them, nor talk to others about them as if they were not present ○ Minimize distractions and noise ○ Allow enough time for resident to process and respond; if they have difficulty explaining something, ask them to explain in a different way ○ Monitor body language to ensure a non-threatening posture and maintain eye contact ○ Nonverbal communication is very important to dementia residents ○ Choose simple words and short sentences, and use a calm tone of voice ○ Call the person by name and make sure you have their attention before speaking ○ Keep choices to a minimum in order to reduce resident’s frustration and confusion ○ Include residents in conversations with others ○ Do not make flat contradictions to statements that are not true ○ Change the way responses are made to avoid 	

Module T – Dementia and Alzheimer’s Disease	
<p>confusion, frustration, embarrassment, and behavioral outbursts</p> <ul style="list-style-type: none"> ○ Use of communication devices (such as a picture board, books, or pictures) encourages resident’s independence and decreases frustration 	
<p>(S-29-30) Dementia and Alzheimer’s Disease – Communication Tips by Nurse Aide</p> <ul style="list-style-type: none"> ● Communication tips to use when caring for resident with Alzheimer’s disease <ul style="list-style-type: none"> ○ Be calm and supportive ○ Focus on feelings, not facts ○ Pay attention to tone of voice ○ Identify yourself and address the resident by name ○ Speak slowly and clearly ○ Use short, simple and familiar words, and short sentences ○ Ask one question at a time ○ Allow enough time for a response ○ Avoid the use of pronouns (e.g., he, she, they), negative statements and quizzing ○ Use nonverbal communication, such as pointing and touching ○ Offer assistance as needed ○ Have patience, flexibility and understanding 	
<p>(S-31) Dementia and Alzheimer’s Disease – Key Words About Behavior Issues</p> <ul style="list-style-type: none"> ● Behavior – how a person acts ● Catastrophic reaction – an extreme response ● Delusion – a false belief ● Depression – a loss of interest in usual activities ● Paranoia – an extreme or unusual fear ● Sundowning – increased agitation, confusion and hyperactivity that begins in the late afternoon and builds throughout the evening ● Trigger – an event that causes other events ● Wandering – moving about the facility with no purpose and is usually unaware of safety ● Alzheimer’s disease progresses in stages and so does behavior 	
<p>(S-32) Dementia and Alzheimer’s Disease – Behavior Issues</p> <ul style="list-style-type: none"> ● Behavior – an observable, recordable, and measurable physical activity <ul style="list-style-type: none"> ○ People with normal brain function have the ability to control responses 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ People with Alzheimer’s disease and dementia have lost much of this ability 	
<p>(S-33) Dementia and Alzheimer’s Disease – Behavior Issues</p> <ul style="list-style-type: none"> ● Behavior is a response to a need <ul style="list-style-type: none"> ○ The resident is frequently unable to express his or her needs because of cognitive losses ○ Nurse aides must be attentive to gestures and clues demonstrated by the resident ○ Every behavior is a response to a need or situation ○ Gestures, sounds, and conversation may reveal trigger to the behavior ○ As verbal skills diminish, behavior becomes the communication method ● Before choosing a specific behavioral intervention, trigger of behavior must be identified ● Triggers may be environmental, physical, or emotional <ul style="list-style-type: none"> ○ Environmental triggers – rearrangement of furniture, increased number of people in facility, change in daily schedule ○ Physical triggers – new medications, infections, pain ○ Emotional triggers – may include reactions to loss, depression, frustration, self-perception, past life events, personality 	
<p>(S-34) Dementia and Alzheimer’s Disease – Behavior Issues</p> <ul style="list-style-type: none"> ● Effective behavior management <ul style="list-style-type: none"> ○ Identifying trigger ○ Understanding trigger ○ Adapting environment to resolve behavior ● Changing the environment (such as reducing excessive noise and activity) or providing comfort measures (such as rest or pain medication) may reduce behavior ● Intervention must meet needs of resident while maintaining respect, dignity and independence ● Successful behavioral interventions <ul style="list-style-type: none"> ○ Preserve resident’s dignity ○ Helps staff gain confidence, improve morale, and increase job satisfaction ● Behavior control also assists in reducing use of restraints, decreases abuse and neglect, and increases family satisfaction 	
<p>(S-35) Dementia and Alzheimer’s Disease – Behavior Issues</p> <ul style="list-style-type: none"> ● Common behaviors 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ Wandering ○ Sundowning ○ Depression ○ Disorientation to person, place, and/or time ○ Inappropriate sexual behavior ○ Emotional outbursts ○ Combativeness (hostility or tendency to fight) ○ Inappropriate toileting (use of inappropriate areas for toileting, such as a plant) ○ Easy frustration ○ Repetitive speech or actions ○ Swearing, insulting, or tactless speech ○ Shadowing (following others) ○ Withdrawal ○ Hoarding (hiding objects or food) ○ Sleep disturbances ○ Paranoia and suspiciousness ○ Delusions and/or hallucinations ○ Decreased awareness of personal safety ○ Catastrophic reactions (extreme emotional responses such as yelling, crying, or striking out that seem out of proportion to the actual event) 	
<p>(S-36) Wandering</p> <ul style="list-style-type: none"> ● Wandering is a known and persistent problem behavior that has a high risk factor for resident safety ● Safety risk factors may include <ul style="list-style-type: none"> ○ Falls ○ Elopement ○ Risk of physical attack by other residents who may feel threatened or irritated by the activity ● Residents wander for several reasons and may include <ul style="list-style-type: none"> ○ Trying to fulfill a past duty, such as going to work ○ Feeling restless ○ Experiencing difficulty locating their room, bathroom or dining room ○ Reacting to a new or changed environment ● Preservation of resident safety is the main objective when caring for the wandering resident and interventions include <ul style="list-style-type: none"> ○ Establish a regular route ○ Provide rest areas ○ Accompany the resident ○ Provide food and fluid ○ Redirect attention to other activities or objects ○ Determine if behavior is due to environmental stress 	

Module T – Dementia and Alzheimer’s Disease	
<p>(S-37) Sundowning</p> <ul style="list-style-type: none"> • Sundowning is behavioral symptom of dementia that refers to increased agitation, confusion, and hyperactivity that begins in late afternoon and builds throughout the evening • Interventions <ul style="list-style-type: none"> ○ Encourage rest times ○ Plan bulk of activities for the morning hours ○ Perform quieter, less energetic activities during the afternoon 	
<p>(S-38) Sexual Activity</p> <ul style="list-style-type: none"> • Inappropriate sexual activity is another behavior issue. Offensive or inappropriate language, public exposure, offensive and/or misunderstood gestures are the characteristics of this behavior • Interventions <ul style="list-style-type: none"> ○ Treat the resident with dignity and respect ○ Remove resident from public situation ○ Redirect attention to an appropriate activity ○ Assist the resident to bathroom 	
<p>(S-39) Dementia and Alzheimer’s Disease – Agitation</p> <ul style="list-style-type: none"> • Agitation occurs for a variety of reasons • Nurse aides must ensure safety and dignity of agitated resident while protecting safety and dignity of other residents • Interventions <ul style="list-style-type: none"> ○ Do not crowd the resident; allow them room to move around while still providing for safety ○ Ask permission to approach or touch them ○ Maintain a normal, calm voice • Interventions <ul style="list-style-type: none"> ○ Slow down and do not rush the resident ○ Limit stimulation in the resident’s area ○ Avoid confrontations and force ○ Avoid sudden movements outside of the resident’s field of vision 	
<p>(S-40) Dementia and Alzheimer’s Disease – Disruptive Verbal Outbursts</p> <ul style="list-style-type: none"> • Disruptive verbal outbursts are one of the most persistent behaviors in a long-term care facility. These outbursts may include: <ul style="list-style-type: none"> ○ Screaming ○ Swearing ○ Crying ○ Shouting 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ Loud requests for attention ○ Negative remarks to other residents or staff (including racial slurs) ○ Talking to self ● Anger and aggression are often the visible symptoms of anxiety and fear. ● Interventions <ul style="list-style-type: none"> ○ Reassure residents that they are safe ○ Redirect their attention to an activity ○ Assist residents with toileting, feeding or fluids ○ Move residents to a quiet area ● Notify nurse immediately of aggressive behaviors that may threaten other residents and/or staff and stay with the resident 	
<p>(S-41) Dementia and Alzheimer’s Disease – Catastrophic Reaction</p> <ul style="list-style-type: none"> ● Emotional, environmental, or physical triggers may result in a catastrophic reaction ● Catastrophic reactions are out-of-proportion responses to activities or situations 	
<ul style="list-style-type: none"> ● Warning signs of a possible reaction <ul style="list-style-type: none"> ○ Sudden mood changes ○ Sudden, uncontrolled crying ○ Increased agitation ○ Increased restlessness ○ Outburst of anger (physical or verbal) 	
<p>(S-42) Dementia and Alzheimer’s Disease – Catastrophic Reaction</p> <ul style="list-style-type: none"> ● Interventions include <ul style="list-style-type: none"> ○ Speak softly and gently in calm voice ○ Protect resident, self, and others as necessary ○ Remove the person from a stressful situation ○ Avoid arguing with the resident ○ Avoid the use of restraints ○ Redirect the resident’s attention ○ Change activities if the activity is causing the reaction 	
<p>(S-43) Dementia and Alzheimer’s Disease – Catastrophic Reaction</p> <ul style="list-style-type: none"> ● Interventions that should not be used include <ul style="list-style-type: none"> ○ Arguing with resident or other staff members ○ Speaking loudly to resident or other staff members ○ Treating resident like a child ○ Asking complicated questions ○ Using force or commanding resident to do something 	
<p>(S-44) Dementia and Alzheimer’s Disease – Catastrophic</p>	

Module T – Dementia and Alzheimer’s Disease	
<p>Reaction</p> <ul style="list-style-type: none"> • Caregiver behaviors that should be encouraged and used to decrease or prevent use of restraints <ul style="list-style-type: none"> ○ Maintaining calm and non-controlling attitude ○ Speaking softly and calmly ○ Asking one question at a time and waiting patiently for the answer ○ Using simple, one step commands, and positive phrases ○ Avoiding crowding resident with more people than needed for the task ○ Providing a distraction, such as an activity or music 	
<p>(S-45) Dementia and Alzheimer’s Disease – Activities</p> <ul style="list-style-type: none"> • Goal in the care of residents with Alzheimer’s disease is to give support needed so that they can participate in the world around them to the best of their ability • Nurse aide must focus on the fact that the resident is involved and satisfied, not on the task or activity 	
<p>(S-46) Dementia and Alzheimer’s Disease – Activities</p> <ul style="list-style-type: none"> • Activities fall into two categories <ul style="list-style-type: none"> ○ Doing activities – keep the person busy ○ Meaningful activities – have value to the resident with dementia • Activity-based care is focused on assisting resident to find meaning in his or her day, rather than doing activities just to keep the person busy 	
<p>(S-47) Dementia and Alzheimer’s Disease – Activities</p> <ul style="list-style-type: none"> • Principles of activity-based care <ul style="list-style-type: none"> ○ Focuses on giving caregivers the tools to create chances for residents with dementia to be successful in activities and their relations with other people ○ Uses any daily activity that can be broken down into individual, sequential steps ○ Works within remaining abilities or strengths of the resident with Alzheimer’s disease, helping to shift emphasis away from resident’s disabilities and impairments ○ Adjusts an activity based on resident’s ability level ○ Depends on caregiver’s interest and desire to create opportunities for successful interactions that are planned and guided to encourage resident’s full involvement ○ Rewards the resident’s attempts at participating in activities and provides them with a sense of being capable and alive 	

Module T – Dementia and Alzheimer’s Disease	
<p>(S-48) Dementia and Alzheimer’s Disease – Activities</p> <ul style="list-style-type: none"> • Timing of activities is important and individualized <ul style="list-style-type: none"> ○ Attention and focus activities, physical activities and sensory activities provided during each resident’s prime time and on a set, routine basis may increase participation and satisfaction with that activity • Cultural environment refers to values and beliefs of people in an area <ul style="list-style-type: none"> ○ Staff, residents, families, visitors and volunteers determine culture of the facility ○ Promotion of positive environment begins with inclusion of the residents and making them feel important to relationships and activities 	
<p>TEACHING TIP #1T: DVD</p> <p>Show DVD, <i>Still Alice</i>, if available.</p> <p>TEACHING TIP #2T: Guest Speaker An employee from a local Alzheimer’s unit</p>	
<p>(S-49) Dementia and Alzheimer’s Disease – Nurse Aide Stress and Burnout</p> <ul style="list-style-type: none"> • Providing care on daily basis for resident with Alzheimer’s or dementia extremely stressful • This population of residents may be more prone than others to becoming victims of abuse or neglect • Because of this, nurse aides that deal with Alzheimer’s or dementia residents must take additional precautions to ensure they do not over-react or react negatively to resident behaviors • Regardless of the cause, nurse aides must take necessary steps to ensure that they do not react inappropriately to resident behavior • Frustration can lead to <ul style="list-style-type: none"> ○ Negative, harsh or mean-spirited statements made to staff or residents ○ Physical abuse of residents ○ Emotional abuse of residents ○ Verbal abuse of residents ○ Neglect of residents • Nurse aides must always remember that statements and behaviors of residents suffering from Alzheimer’s or dementia are beyond control of the resident and not personally directed toward nurse aide • Usual profile of employee who is subject to burnout <ul style="list-style-type: none"> ○ Takes work personally and seriously 	

Module T – Dementia and Alzheimer’s Disease	
<ul style="list-style-type: none"> ○ Works over at end of a shift ○ Works extra shifts ○ Takes on extra projects ○ Very high or unrealistic expectations ○ Perfectionist attitude ● Signs of staff burnout include <ul style="list-style-type: none"> ○ No longer enjoying work ○ Irritable with residents and co-workers ○ Fear of failure, inadequacy, job loss and obligation to supervisor, co-workers, family ○ Feelings of being overwhelmed ○ Viewing work as a chore ○ Frequent complaints of illness ● Strategies to use to assist in preventing burnout include <ul style="list-style-type: none"> ○ Maintain good physical and mental health ○ Get adequate amounts of sleep on off days and before each shift ○ Remain active within family and community ○ Maintain a separation between work and personal relationships ○ Maintain a sense of humor
