> RE: Response by PCMH to Novant's Petition to Repeal or Amend Policy AC-3 in the Draft 2012 State Medical Facilities Plan

Dear Ms. Potter:

Please find attached for filing the response of Pitt County Memorial Hospital ("PCMH") to the Petition to Repeal or Amend Policy AC-3 filed by Novant Health, Inc. ("Novant") on March 2, 2011 with the State Health Coordinating Council ("SHCC").

Please do not hesitate to contact me with any questions.

**Enclosures** 

# Response By PCMH to Novant's Petition To Repeal or Amend Policy AC-3 in the Draft 2012 State Medical Facilities Plan

This Response is filed by Pitt County Memorial Hospital, Incorporated ("PCMH") related to the Petition filed by Novant Health, Inc. ("Novant") with the State Health Coordinating Council ("SHCC"). On March 2, 2011, Novant filed its Petition with the SHCC to repeal or amend Policy AC-3 relating to Academic Medical Teaching Center Hospitals ("AMCs") in the draft 2012 State Medical Facilities Plan (the "Draft Plan").

Novant's Petition essentially restates the substance of the arguments made in its prior Petition filed on August 2, 2010 ("2010 Petition"). As a result, PCMH is attaching its response to the 2010 Petition as Exhibit A. In addition, on March 2, 2011, PCMH along with the other AMCs in North Carolina filed a Petition for Change in Policy AC-3 ("AMC's Petition"). The AMC's Petition sets forth in detail how Policy AC-3 furthers the legislative intent of the Certificate of Need ("CON") Law, the unique nature of AMCs, and how other CON procedures do not fulfill the academic need.

Novant's Petition fails to cover any new ground. Novant has essentially recycled its 2010 Petition. For example, Novant once again fails to provide any compelling reason why Policy AC-3 should be eliminated. Novant also repeats its argument that healthcare has changed since 1983, AMCs do not need Policy AC-3, Policy AC-3 gives AMCs an unfair advantage, and the Policy is contrary to North Carolina's health planning process. All of these arguments were refuted in PCMH's prior responsive filing in 2010. It is important to note that Novant's Petition fails to address the points raised by PCMH's response to the 2010 Petition. Novant once again fails to comprehend the unique and essential role played by AMCs in their teaching and research missions. It is clear that Novant is attempting to take a specific argument it has with an AC-3 application approved by the CON Section, which is currently under appeal, and make it a springboard for repealing Policy AC-3.

Since PCMH fully responded to the fallacies contained in Novant's arguments in PCMH's 2010 response, which is attached, PCMH presents the following abbreviated response to supplement and provide emphasis to its prior response.

# I. Benefits of Policy AC-3

• AMCs are driven by an educational and research mission that is unique to AMCs. Non-AMCs, like Novant, lack this focus. AMCs need the flexibility that Policy AC-3 provides to apply for services and equipment necessary to train the future physicians in North Carolina. These are the very physicians that Novant relies. upon to serve its patients. Placement is needed at hospitals not only for residents, but also for medical students, nursing students, and technicians, among others. AMCs in North Carolina shoulder the burden when it comes to the commitment to teach and sponsor residents. Forsyth Memorial Hospital, a facility of Novant's that it highlighted for taking on residents, trained less than 10% of the residents that PCMH did, in a recent year. (See Exhibit A, Table 1) In addition, unlike AMCs, Novant has not historically been a Sponsoring Institution for residents.

As such, Novant does not have to undertake the numerous responsibilities associated with sponsorship.

• While Novant is correct that many of the major medical equipment, techniques, and service lines that were initially the province of AMCs are now being performed at non-AMC facilities, AMCs are still in the forefront of future advancements in medicine. Policy AC-3 allows AMCs the ability to obtain needed equipment and services in order to continue to make needed advances. AMCs are also responsible for training the physicians that will make those breakthroughs.

# II. Policy AC-3 is Not Anti-Competitive

- Policy AC-3 allows for competition by allowing an AMC to apply for the equipment and services it needs within the realm of Policy AC-3 without filing an application when a need is generated in the SMFP for those same equipment and services. If Policy AC-3 did not exist and an AMC needed a piece of major medical equipment to meet any one of the conditions under Policy AC-3, it would apply for the need in the SMFP and potentially obtain a competitive advantage by asserting the equipment was needed for students and research.
- The need determinations in the SMFP do not take into account the unique needs of the AMCs. Policy AC-3 is essential to allow for those limited instances in which an AMC needs to apply for projects outside of the SMFP need determinations in order to allow AMCs to maintain their academic functions.
- AMCs that file applications pursuant to Policy AC-3 are not given a "free pass" by the CON Section. Policy AC-3 applicants must still meet all applicable statutory and regulatory criteria as well as demonstrate compliance with the provisions of Policy AC-3. As such, the CON Section is an appropriate gatekeeper to determine if Policy AC-3 applicantions should be approved. If a competitor of an AC-3 applicant, like Novant, believes that the CON Section has erred, it may file a petition and initiate the appeal process.
- Most telling, no other hospital systems in the state have joined in Novant's Petition seeking an end to Policy AC-3. It is apparent that these other hospital systems can see the benefit of Policy AC-3 both to themselves, the patients served in North Carolina, and the future healthcare providers in the state.

## III. Policy AC-3 Has Not Been Abused by AMCs

 Novant has failed to demonstrate any abuse by AMCs in applying for CONs via Policy AC-3. Novant's entire Petition focuses on one CON application filed by one AMC.

- Novant argues on the one hand that Policy AC-3 is being abused and on the other hand that Policy AC-3 is so rarely invoked that it must have outlived its usefulness. The fact that Policy AC-3 is so rarely used demonstrates the careful consideration that AMCs undertake before filing an application subject to the Policy. In essence, when AMCs need to apply for medical equipment and services that do not meet the narrow requirements under Policy AC-3, they do so in the same manner as any other hospital system.
- Novant points to a petition filed by PMCH in 2007 to add operating rooms to the 2008 State Medical Facilities Plan ("SMFP") to justify its argument that Policy AC-3 is outdated. This contention is without merit. PCMH did not seek to file for those operating rooms pursuant to Policy AC-3 because those operating rooms did not meet the research and/or educational component necessary to apply for a project pursuant to Policy AC-3. PCMH filed the petition to add six operating rooms in the SMFP solely based on a lack of capacity in the Pitt-Greene Operating Service Area. This is just another example of how seriously AMCs take the requirements under Policy AC-3, and only apply under Policy AC-3 when it is necessary.
- Novant is unable to point to any alleged problems with Policy AC-3 beyond Novant's unique issues with the CON application filed by North Carolina Baptist Hospital ("NCBH") for operating rooms in 2010. No other AC-3 projects were singled out by Novant. It appears that the real issue that Novant has with Policy AC-3 relates to the way in which the CON Section applied Policy AC-3 in its review of the NCBH application and not with Policy AC-3 itself. Novant has undertaken the necessary steps to appeal the CON Section's decision to approve the NCBH AC-3 application. By undertaking this assault on Policy AC-3, Novant seeks to usurp the authority given by the Legislature to the Office of Administrative Hearings, the Department of Health and Human Services, and the appellate courts to resolve issues concerning the appropriateness of a particular CON decision. It would be inappropriate for the SHCC to step into Novant's appeal of NCBH's AC-3 application.

## IV. There is No Need to Eliminate or "Modify" Policy AC-3

- Novant's proposed "modifications" are no more than a backhanded way of eliminating Policy AC-3.
- Essentially, Novant wants AMCs to file a special needs petition to demonstrate why certain equipment, facilities, and/or services are necessary to advance the research and teaching missions of an AMC. Then, Novant wants to impose a "clear and convincing" standard on AMCs to demonstrate the need for the assets for which a need determination is requested. Such a standard is a legal term of art, and this is an attempt by Novant to raise the bar so high as to prevent the approval of any petitions.

- In the unlikely event that such a petition by an AMC is approved, Novant wants to add the requirement that "anyone may apply to meet the need." This requirement is inconsistent with the other modifications proposed by Novant. If anyone can apply for the need, would an AMC jump through all of these onerous hoops in order to show the need if non-AMCs can apply as well? The fact that anyone may apply to meet such a need eliminates any acknowledgement of the special needs of AMCs and undermines the purposes of Policy AC-3. If anyone can apply for a need generated pursuant to a modified Policy AC-3, it would make no sense for an AMC to file such a petition since it would be less challenging to file a petition under the current special needs petition process.
- Under Novant's proposed modifications, if a Policy AC-3 petition were approved and a need is placed in the SMFP, the AMC applicant must obtain written statements from all comparable services within a 20-mile radius indicating they cannot meet the need described in AMC's CON application. The likelihood that a provider could obtain such written statements is limited, especially in light of the fact that not all hospitals would be willing to write such a letter, whether or not they can meet such services. Further, providers like UNC and Duke would likely never be able to get such a CON approved since they are both AMCs in close proximity to each other that offer many overlapping, but highly needed and utilized services. Each would have veto power over the other. Again, a non-AMC would not need to meet this requirement under Novant's proposed modifications.
- In the unlikely event that an AMC were actually awarded a CON pursuant to modified Policy AC-3, they would be obligated to numerous detailed reporting requirements. The suggested reporting requirements are either highly burdensome and/or vague. If a non-AMC like Novant were awarded the CON in such a circumstance, no such reporting requirements would apply.

## Conclusion

Novant has failed to put forth any valid arguments as to why Policy AC-3 should be eliminated. Novant's proposed modifications to Policy AC-3 demonstrate that Novant's true intent is to cripple the ability of AMCs to apply for any projects that would benefit their research and teaching missions without regard to the negative impact this would have on patients, physicians and the future of medical advancement in North Carolina. We respectfully request that Novant's petition be denied.

# Response By PCMH to Novant's Petition To Repeal or Amend Policy AC-3 in the Draft 2011 State Medical Facilities Plan

This Response is filed by Pitt County Memorial Hospital, Incorporated ("PCMH") related to the request filed by Novant Health, Inc. ("Novant") with the State Health Coordinating Council ("SHCC"). On August 2, 2010, Novant filed its request with the SHCC to amend the 2011 State Medical Facilities Plan ("SMFP") by seeking to repeal or substantially modify Policy AC-3, a statewide policy related to Academic Medical Centers ("AMCs").

PCMH believes the petition should be summarily dismissed since it was not filed in a timely manner. Novant requests a change in a basic policy, Policy AC-3, in the SMFP, which has a statewide impact. Thus, per the SMFP's filing deadlines noted on pp. 9-10 of the 2010 plan, Novant's petition was required to be filed on or before March 3, 2010. The petition was not filed until August 2, 2010.

However, even if Novant's request were timely filed, PCMH opposes any repeal of, or modifications to, a long-standing SMFP policy (AC-3) without any compelling reasons. In the discussion below, PCMH refutes each point raised by Novant as a reason to repeal or modify Policy AC-3.

In the petition, Novant cited several reasons for the elimination or change to Policy AC-3. Specifically, Novant argued:

# 1. Policy AC-3 is No Longer Necessary because:

• Healthcare has changed dramatically since 1983. Novant argues that the evolution of healthcare has decreased the gap between AMCs and non-MCs in terms of technology and the sophistication of services offered. Novant cited an example to illustrate their point. Novant stated, "Comparing a hospital like Forsyth Medical Center (FMC) with an AMC such as North Carolina Baptist Hospital (NCBH) is especially revealing, as it shows that the "service gap" at that level is indeed very small."

### **PCMH Response**

While the gap may be closing between AMCs and non-AMCs in terms of services offered, Policy AC-3 is not intended to address the equitable distribution of healthcare services and resources to assure geographic access by all. This is handled by the traditional SMFP and Certificate of Need ("CON") process that is equally applicable to all providers in North Carolina, regardless of AMC status. Policy AC-3 is solely focused on education and research. And while the "service gap" may be closing, the "education and research gap" that exists between AMCs and non-AMCs is still very larger.

AMCs devote a significant amount of attention and resources to education and research. It is a major component of their mission and their business. For non-AMCs, education and research is secondary or not a part of the

mission at all. In fact, each of five AMCs<sup>1</sup> in North Carolina identify education and research in their mission, vision, and/or value statements. According to their website, education and training are not even mentioned in Novant's mission, vision, or value statements.<sup>2</sup> AMCs accept the responsibility of not only focusing on the patient, but also training future providers and researching better ways to provide care.

In addition to organizational focus, there is also a significant gap between AMCs and non-AMCs in terms of willingness to train residents. According to Table 13 below, 87% of all residents FY08 received their training at an AMC. Using Novant's own example, while the "service" gap may be small between FMC and NCBH, there is a significant gap in the commitment to teaching between the two hospitals. According to Table 1 below, NCBH trained over 18 times more residents that year than FMC.

Moreover, AMCs do much more than provide a training site, they are Sponsoring Institutions for residency and fellowship programs. Sponsoring Institutions assume the ultimate financial and academic responsibility for a

<sup>&</sup>lt;sup>1</sup> Carolinas Medical Center ("CMC") is an AMC for SHCC purposes; however, CMC cannot currently use Policy AC-3

program, assuring the programs are in substantial compliance with the Accreditation Council for Graduate Medical Education requirements. Sponsoring Institutions' responsibilities include resident assignments at all participating sites. This means that Sponsoring Institutions develop the resident rotations, assuring that residents receive adequate training to meet the specific residency program requirements. If Sponsoring Institutions or participating sites do not have a service or lack adequate access to a service or technology other participating sites must be added to the rotation. Having the flexibility to expand or obtain new services or technologies as residency requirements change or programs are expanded are very important. The SHCC understood this need when the AMC policy was developed. While the policy requires the AMC apply for the CON and meet specific teaching and research requirements, it doesn't require there be a need in the SMFP or that the AMC file a petition for an adjustment to need.

PCMH used the AMC policy when it added pediatric and traumatic brain injury rehabilitation beds to its rehabilitation hospital. Prior to adding the beds, Physical Medicine and Rehabilitation residents had to go to Charlotte or out-of-state to gain access to pediatric or traumatic brain injury patients, since the PM&R residency program requirements required residents to treat these patients.

While some Sponsoring Institutions are not AMCs, in North Carolina most Sponsoring Institutions are AMCs. Table 2 below shows the Sponsoring Institutions in North Carolina and the number of residents and fellows participating in each Sponsoring Institution programs. As noted, 91% of residents and fellows trained in North Carolina are sponsored by AMCs.

	TOTAL	2,965

Source: www.acgme.org; Acreditation Council for Graduate Medical Education, Search Programs and Sponsors As noted in the more detailed Exhibit A at the end of this document, the numbers of programs sponsored by the AMCs are extensive. Each residency or fellowship program has specific education requirements, which must be met to retain accreditation.

The level of commitment to education and research aside, Novant ultimately failed to recognize that the "service gap" at many North Carolina hospitals is closing due to the physicians (who are mostly trained at AMCs) applying what they have learned once they leave the AMC facility. Physicians bring the knowledge received from their AMC education to the non-AMC setting. As a result of their training and exposure to state-of-the-art research, technology, and facilities at AMCs, physicians are in fact able to take the knowledge they have gained and apply it in a non-AMC setting. This is ultimately what has narrowed the "service gap". However, this gap could not have been narrowed if not for the research and education received at the AMCs. Using Novant's own example, a rough survey of FMC's medical staff as posted on the "physician finder" section of their website indicates 56% of the medical staff went to medical school and/or attended an internship, residency, and/or fellowship program at one of the North Carolina AMCs.4 FMC has obviously benefited from the education and training over half its medical has received at North Carolina AMCs as evident from the identified reduction in the "service gap".

In reality, all hospitals in North Carolina benefit from Policy AC-3, not just the four qualifying AMC facilities. The SMFP can not unduly constrain the ability of AMCs do this training and research, which is why the AC-3 exemption exist...to allow AMCs to expand capacity in order to train or perform research, regardless of need established in the SMFP.

AMCs Do Not Need Policy AC-3. Novant's argues, "the relative lack of activity under Policy AC-3 suggests that the AMCs do not rely heavily on Policy AC-3 to address their teaching and research needs or other healthcare activities." Novant also argues that AMCs can, with "relative ease", misuse Policy AC-3

## PCMH Response

Novant's arguments are completely contradictory. The relative lack of activity under Policy AC-3 would suggests that AMCs do not misuse the AMC policy and that the policy requirements as written are very stringent to prevent misuse. AMCs still must apply for a CON, demonstrate sufficient demand for teaching and/or research, prove that the requirements of the policy are met and the project is financially feasible, among other things.

<sup>&</sup>lt;sup>4</sup> Based on a sampling of 72 physicians with the last names beginning with A-D. Sample represents almost 10% of the 745 physicians listed on the website.

Novant cited several avenues in which an AMC could add needed services through the special needs petition, N.C. General Statute 131E-179, and traditional CON processes instead of using Policy AC-3. The relative lack of activity under Policy AC-3 combined with the number of CONs filed under the traditional process and the number of special needs petitions filed show that the policy is used only after all other avenues are exhausted.

## 2. Policy AC-3 Gives Academic Medical Centers an Unfair Advantage.

Novant's petition states that Policy AC-3 gives AMCs three unfair advantages, including:

- Policy AC-3 allows the AMC to avoid the need determinations in the SMFP
- The exclusion of volume from services granted under the AC-3 Policy could suppress the identified need for additional services
- Policy AC-3 can be used for any SMFP-limiting service, not just limited to education and research activities.

#### **PCMH Response**

AMCs are not given an unfair advantage. First, Policy AC-3 does not allow AMCs to avoid the need determinations in the SMFP. The SMFP identifies needs for services and equipment to treat patients. AMCs are held to the same standards as all other hospitals when it comes to the equitable distribution of needed healthcare services throughout the State. However, Policy AC-3 has nothing to do with equitable distribution or identification of needed healthcare resources for the provision of care. Policy AC-3 references only resources needed to support education and research, which, as noted above, is primarily concentrated in AMCs.

Second, the exclusion of volume from services granted under the AC-3 Policy actually do not suppress the identified need for additional services. Training and research take time. As a result, the maximum capacity of a service or piece of equipment will be lower at an AMC compared to a non-AMC. The SMFP has specific volume thresholds in order to trigger a need. The reduction in volume due the increased time required for training and research could essentially keep total volumes from reaching the required threshold.

Thirdly, as stated above, Policy AC-3 specifically is written to support education and research activities. Therefore, Policy AC-3 cannot simply be used for any SMFP limiting service. It can only be used for those services that directly affect

educational and research activities, which, for different AMC, could be different resources depending on the focus of the institution.

# 3. Policy AC-3 Is Inconsistent with North Carolina's Health Planning Process.

Novant states that the "NC Health Planning Process and its CON program are designed to ensure that only new institutional health services that are actually needed are built". Novant argues Policy AC-3 is inconsistent with this process.

## **PCMH Response**

As stated above, the purpose of the SMFP and CON process is to assure the equitable geographic access of cost efficient, high quality healthcare services throughout NC. Policy AC-3 compliments this purpose by assuring the equitable distribution of resources used for education and research to the facilities that assume the majority of the responsibility for these initiatives (AMCs). As stated above, the service gap seen between AMCs and non-AMCs can partly be attributed to the education and training healthcare providers receive mostly at AMCs. Without these trained providers entering the non-AMC environment, many of the more sophisticated services could not be offered locally. As a result, the equitable geographic access of cost efficient, high quality healthcare services throughout NC could not have been realized. Therefore Policy AC-3 is not inconsistent with the process; it assures process can be successful.

In summary, PCMH believes the petition should be summarily dismissed since it was not filed in a timely manner. However, PCMH strongly opposes any repeal of, or modifications to, a long-standing SMFPO policy that:

- 1. Allows NC AMCs to meet their dual missions of both healthcare provider and healthcare educator,
- 2. Recognizes the inequitable burden AMCs have in providing education and research opportunities when compared to non-AMCs,
- 3. Is stringent enough to deter misuse, yet flexible enough to enable the future development of research and education activities, and
- 4. Compliments the long-standing efforts of the NC Health Planning and CON processes.
